

ETL Script Documentation Report

Script: etl (1).py

Parsed Information

Type: PYTHON

Sources: data/warehouse.csv, data/inventory.csv

Targets: low_stock_report

Transformations: copy, filter/condition, merge, new column: reorder_priority, apply

Auto-Generated Documentation

****Overview****

etl (1).py is a PYTHON ETL script that reads data from data/warehouse.csv, data/inventory.csv, applies transformations, and loads results into low_stock_report.

****What It Does****

- Reads from: data/warehouse.csv, data/inventory.csv
- Applies: copy, filter/condition, merge, new column: reorder_priority, apply
- Writes to: low_stock_report

****Technical Summary****

- Script Type: PYTHON
- Input(s): data/warehouse.csv, data/inventory.csv
- Output(s): low_stock_report
- Operations: copy, filter/condition, merge, new column: reorder_priority, apply

Business Purpose

****Business Purpose****

This script automates processing of data from data/warehouse.csv, data/inventory.csv into low_stock_report, eliminating manual data handling and ensuring data is always current.

****Who Benefits****

Data and analytics teams who depend on low_stock_report for reporting, dashboards, and business decisions.

****Risk if Fails****

If etl (1).py fails, low_stock_report will not be updated ? causing stale or missing data in all downstream reports.

Impact Analysis

ETL Script Documentation Report

Risk Level: MEDIUM

Reason: Failure affects 1 output(s) but no other scripts directly.

Depends on: ['data/warehouse.csv', 'data/inventory.csv']

Writes to: ['low_stock_report']

Affected scripts if fails: None
